TECHNICAL SKILLS

Programming Languages: Python, Java

Data Analysis: NumPy, Pandas, Matplotlib, Seaborn, data preprocessing, exploratory data analysis and visualization

Machine Learning: Scikit-learn, supervised learning, regression, classification, unsupervised learning, clustering, dimensionality reduction and model evaluation

Deep Learning: PyTorch, feed-forward neural networks, CNNs, RNNs, LSTMs, Transformers and GANs

Generative AI and NLP: Natural Language Processing, LLMs, Retrieval-Augmented Generation (RAG), agentic AI, OpenAI API and Groq API

Computer Vision and Audio: MediaPipe, OpenCV, dlib, face embeddings, neural style transfer, AdaIN, Librosa, Resemblyzer and gTTS

Databases and Query Languages: MySQL, SQLite, Supabase, SQL and PL/SQL

Java and Backend Development: Spring Boot, Spring MVC, Hibernate, REST APIs, JDBC, Maven and RabbitMQ

AI Application Development: Streamlit, Flask, WebRTC, HTML, CSS and JavaScript

Development and Deployment Tools: Git, GitHub, Postman, Streamlit Community Cloud and Gunicorn

Basic Exposure: Docker, Kubernetes and AWS EC2/S3

Software Engineer with 4+ years of Java full-stack experience in enterprise applications, REST APIs, Spring Boot, Hibernate, and databases. Transitioning to AI/ML engineering through an IITG professional certificate program and hands-on projects in machine learning, deep learning, generative AI, NLP, and computer vision.

Work history

Java Full Stack Developer

Accelya Solutions India Ltd., Mumbai, India

Product: Cargo Revenue Accounting | **Domain:** Airline

- Contributed to the development and maintenance of an enterprise cargo revenue accounting application using Java, REST APIs, Hibernate, and relational databases.
- Analyzed requirements and existing application workflows to implement change requests and functional enhancements.
- Developed and consumed RESTful services, investigated defects through application logs, and validated APIs using Postman.
- Participated in design, coding, testing, defect resolution, code reviews, Agile ceremonies, and release documentation.

Java Developer

Doyen Infosolutions Pvt. Ltd., Mumbai, India

Project Name: xyz.ai Platform

Domains: Logistics

2024-05 - 2025-08

2023-01 - 2024-05

2020-11 - 2023-01

- Developed and maintained backend modules using Java 8, Spring Boot, Spring MVC, and Hibernate.
- Developed and consumed RESTful APIs and implemented database operations using MySQL and SQL.
- Analyzed change requests, investigated defects, performed manual testing, and delivered application enhancements.
- Prepared technical specifications, developer guides, API documentation, known-issue reports, and release notes.

Java Developer

ELink Software Technologies Pvt. Ltd., Mumbai, India

Products: CRM and Billing Service

Domains: Telecom and Data Platforms

- Contributed to CRM, billing, and data-platform modules through requirement analysis, development, testing, and defect resolution.
- Developed Java web functionality using Spring, Hibernate, JDBC, Servlets, JSP, HTML, and CSS.
- Analyzed application issues, implemented bug fixes, and supported functional enhancements.
- Collaborated with team members on technical design, user requirements, risk tracking, and project updates.

2026-08

EDUCATION AND PROFESSIONAL DEVELOPMENT

Generative AI And Machine Learning: Generative AI And Machine Learning

IIT Guwahati - Guwahati, India

Coursework: Python and data analysis; statistics and mathematics for AI; supervised, unsupervised and reinforcement learning; model evaluation; neural networks, CNNs, RNNs, LSTMs, Transformers and GANs; NLP, LLMs, RAG and agentic AI; Flask, SQL, Git, Docker and Kubernetes.

2015-01

Bachelor of Engineering: Computer Engineering

Mumbai University - Mumbai, India

SELECTED AI/ML PROJECTS

AI/ML Projects

SnapClass - AI-Based Multimodal Attendance System

Python | Streamlit | Supabase | dlib | Scikit-learn | Resemblyzer

- Developed and deployed a multimodal attendance application that identifies enrolled students from classroom photographs or voice recordings.
- Implemented 128-dimensional facial embeddings, linear SVM classification, distance-based face verification, and voice-embedding similarity matching.
- Built QR-based enrollment, teacher and student dashboards, attendance-review workflows, and Supabase-backed storage; deployed on Streamlit Community Cloud.

Apna AI Coach - Real-Time AI Gym Trainer

Python | Streamlit | MediaPipe | OpenCV | WebRTC | Groq | Llama 3.3 | gTTS | SQLite

- Developed real-time pose tracking and rule-based repetition counting for squats, push-ups, biceps curls, shoulder presses, and lunges.
- Calculated joint angles from MediaPipe landmarks and implemented exercise-specific metrics for form evaluation.
- Integrated Llama 3.3 through Groq and gTTS for spoken coaching, configured STUN/TURN for browser camera streaming, and deployed the application on Streamlit Community Cloud.

ArtFusion - Arbitrary Neural Style Transfer

Python | PyTorch | VGG-19 | AdaIN | Flask

- Implemented an AdaIN-based neural style-transfer pipeline using a frozen pretrained VGG-19 encoder and a trainable convolutional decoder.
- Trained the decoder using content-reconstruction and multi-layer style-statistics losses with Adam optimization and learning-rate scheduling.
- Developed a Flask interface supporting image uploads, adjustable style strength, model inference, and generated-image previews.
